

# Customized EDI

## WHAT IS CUSTOMIZED EDI?

FREJA is strong and flexible when it comes to integrations and has built large customized solutions for a wide range of customers.

With customized EDI, we create solutions based on external formats and protocols that precisely meet the needs of our EDI partners. Formats can include EDIFACT, XML, CSV, JSON, TXT, IDOCS, FORTRAS BORD512, or any other format. What matters most is that the data is sufficient and of high quality. Protocols can vary and include SFTP, FTPS, SOAP, RestAPI, HTTPS, and more.

## HOW DOES CUSTOMIZED EDI WORK?

Our flexible tools and in-house knowledge enable us to build customized EDI integrations based on your data, file layouts, and methods.

Customized EDI often requires experienced resources, a well-planned project, and commitment from all parties involved. FREJA can provide skilled in-house EDI experts who focus on both the processes and data exchange. Our business and data approach ensures a high success rate in terms of fast and high-quality implementations, as well as stable and robust long-term integrations.

## WHO IS CUSTOMIZED EDI FOR?

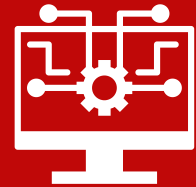

This type of integration often demands a deep understanding of your business, data, and system landscape. It's more of a project than just an EDI case.

FREJA will allocate all the necessary resources for success and will estimate the scope of the project after the initial kickoff discussions and in-depth exploration of formats and requirements. A customized EDI project typically involves a larger number of bookings per week.

## WANT TO GET STARTED?

If you prefer this type of integration, please don't hesitate to contact us to initiate the process and plan the project together.
